TotalSecure

Product Focus	A flexible premium product that allows extra premium to pay-up portions of the policy. Low required premium, strong death benefit, high cash value guarantees.	
Marketing Strategies	Perfect for pension cases. Strong guarantees allow policy to be treated as a fixed asset in an individual's overall portfolio. Small business owners can use death benefit to help estate transfer and the cash value as an additional source of income through policy loans and withdrawals.	
Issue Ages	0–85 (age nearest birthday)	
EZ Underwriting	18–50 up to \$3M 51–60 up to \$1M 61–65 up to \$250,000	
Minimum Face	\$50,000	
Additional Product Benefit (APB-MaxRatio)	N/A	
Minimum Guaranteed Interest Rate	Whole Life insurance doesn't credit interest directly to account values. For all life insurance, cash values must be greater than statutory minimum cash values determined by formulas and parameters explained in Standard Non-forfeiture Law. Part of the formula for determining minimum values is interest and mortality basis. The current basis of mortality and nonforfeiture is the 2017 CSO at 3.25%.	
Interest Rate Credit Method	It is expected that there will be a dividend surplus, but it is not guaranteed. All divisible surplus must be paid to policy holders in the form of policy dividends, though dividends are not guaranteed to be paid.	
Surrender Schedule	N/A

National Life Group® is a trade name of National Life Insurance Company, Montpelier, VT, Life Insurance Company of the Southwest, Addison, TX and their affiliates. Each company of National Life Group is solely responsible for its own financial condition and contractual obligations. Life Insurance Company of the Southwest is not an authorized insurer in New York and does not conduct insurance business in New York.

Riders are supplemental benefits that can be added to a life insurance policy and are not suitable unless the client has a need for life insurance. Riders are optional, may require additional premium and may not be available in all states or on all products.

The Lifetime Income Benefit Rider provides a benefit for the life of the insured if certain conditions are met, including but not limited to the insured's attained age being between age 60 and 85, and that the policy has been in force at least 10 years. Insufficient policy values, outstanding policy loans and other considerations may also restrict exercising the rider. Exercising the rider and receiving an income benefit will reduce the policy's cash value and death benefit and may terminate other riders or reduce their benefits.

The ability of a life insurance contract to accumulate sufficient cash value to help pay expenses or meet accumulation goals will be dependent upon the amount of extra premium paid into the policy, and the performance of the policy, and is not guaranteed. Policy loans and withdrawals reduce the policy's cash value and death benefit and may result in a taxable event. Surrender charges may reduce the policy's cash value in early years.

State specials and other limits may apply.

Obligations to make payments under the Products are solely the obligation of Licensee.

In calculating the performance of the Index, SG deducts a maintenance fee of 0.50% per annum on the level of the Index, and fixed transaction and replication costs, each calculated and deducted on a daily basis. The transaction and replication costs cover, among other things, rebalancing and replication costs. The total amount of transaction and replication costs is not predictable and will depend on a number of factors, including the leverage of the Index, which may be as high as 200%, the performance of the components underlying the Index, market conditions and the changes in the market environments, among other factors. The transaction and replication costs, which are increased by the Index's leverage, and the maintenance fee will reduce the potential positive change in the Index and increase the potential negative change in the Index. While the volatility control applied by the Index may result in less fluctuation in rates of return as compared to indices without volatility controls, it may also reduce the overall rate of return as compared to products not subject to volatility controls.
